

REACH Statement - Ansell (Industrial & New Vertical) products

Ansell is fully committed to its obligations as per European Regulation 1907/2006 and its amendments, concerning the **Registration, Evaluation, Authorisation and Restrictions of Chemicals (REACH)**.

Required chemical registrations, as defined in Article 7 of the REACH Regulation, were made.

With respect to the various defined Candidate lists with “Substances of very high concern” (SVHC’s), and as required per Article 33 of the REACH Regulation, we confirm that all the SVHC substances have been removed from our product formulations and replaced by safer alternatives without any compromise on the product’s performances, before the applicable deadline for notification to the European Chemical Agency (ECHA) as defined by Article 7 of the REACH Regulation.

We can therefore confirm that none of the Ansell products currently contain any of the current defined SVHC substances.

Guido Van Duren
